HABA

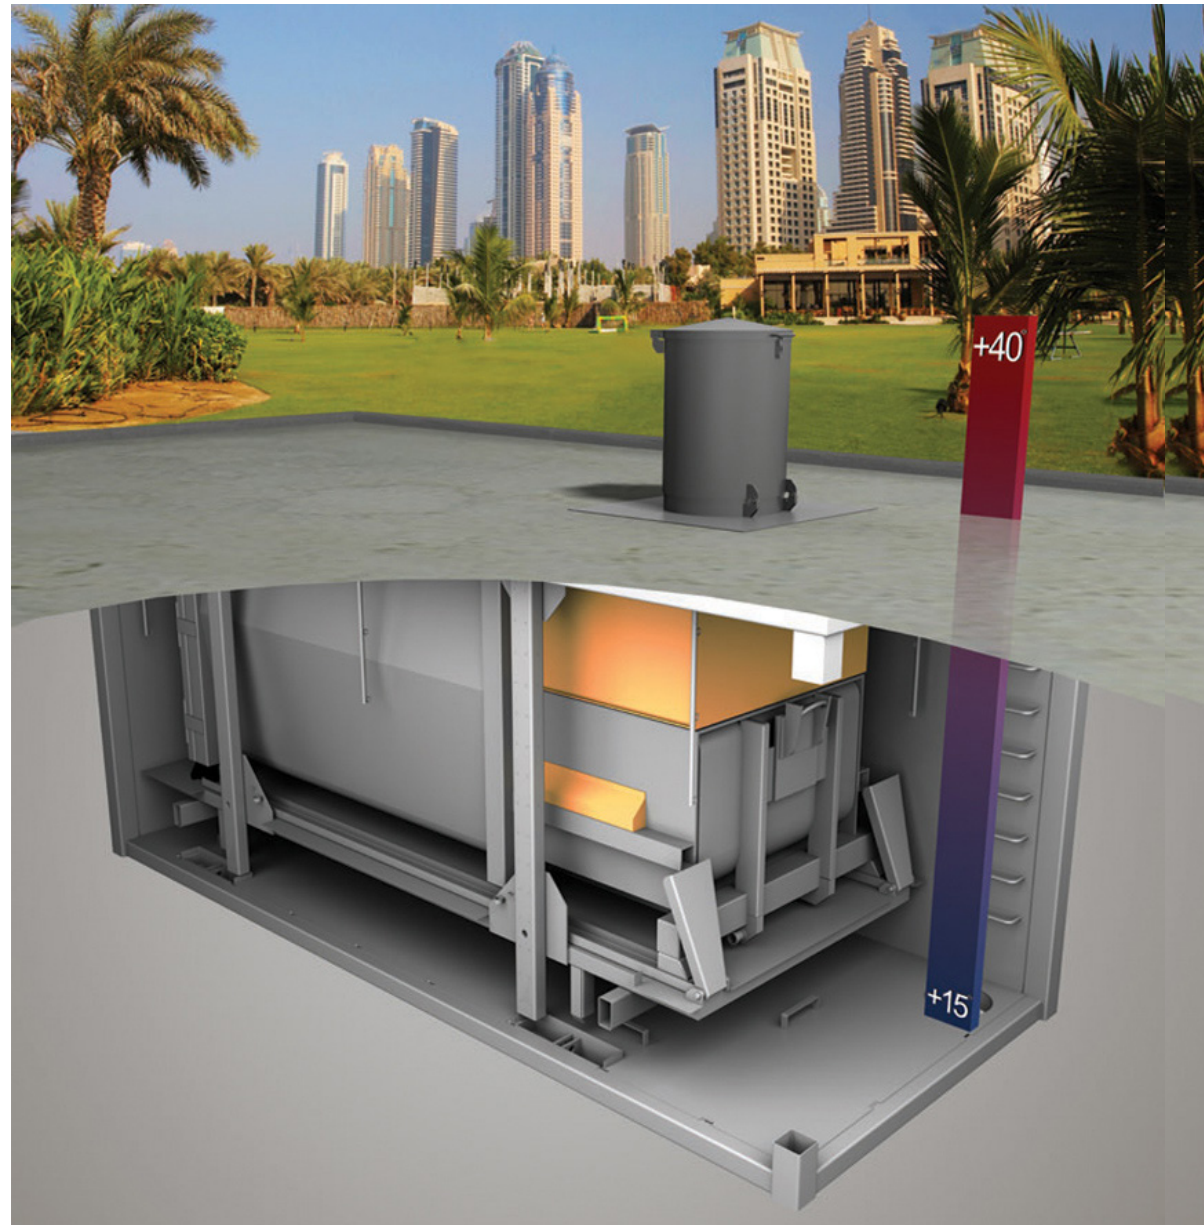

HABA MEGA - Underground Waste Compactor

HABA offers versatile and ecologically friendly solutions for waste management. The product range provides solutions to meet the requirements of modern waste management, from small waste containers to large ones,

in addition to waste management solutions tailored to match the customer's needs. The goal of the HABA is to offer people a safer and healthier living environment today and for the future.

The Invisible Giant of Waste Management

HABA MEGA waste compactor is a space-saving and stylish system for all locations in which environment poses challenges to the designer. There is only a small bin on the ground. The assembly underground consist of two units: a container with a metal frame and a compactor. Installation of the hydraulic HABA MEGA system in a ready pit takes only about three to four hours. The system is well suited to all types of waste and is an efficient solution for recycling.

The HABA MEGA system can be dimensioned to match the location. Standard compactor sizes are 10m³, 16m³ and 20m³. In larges HABA MEGA solution, the underground compactor holds more than 100m³ of uncompacted waste. A large and cool container enables longer emptying intervals. Both financial and ecological savings are made in waste transportation costs.

Fast in Operation

Installation of the hydraulic HABA MEGA system in a ready pit takes only about three to four hours.

Power lies beneath

Thanks to the discreet HABA MEGA system, intermediate waste storage can be realised in a stylish and safe manner even in demanding locations. An underground intermediate storage solution stays cool all year round, and both the collection container and the environment stay more hygienic and odour-free.

A Versatile and Acclaimed System

The HABA MEGA waste compactor system is suitable for almost any location where a cost-efficient and ecological waste management system is needed. The system can be used to control waste management efficiently both in large public areas and in narrow inner courts of properties in city centres.

HABA MEGA has won several international innovation awards, and reference customers can be found in many large cities, such as Moscow, Dubai, Stockholm, Zurich and Helsinki.
